ABOUT ME

I design and build digital experiences that people enjoy using. As a Web Developer and UI/UX Designer, I combine creativity with technical problem-solving to create interfaces that feel modern, intuitive, and purposeful. My work focuses on turning concepts into polished products through thoughtful design, clean development, and attention to detail. Whether it's crafting user-centered experiences, developing responsive websites, or experimenting with new ideas, I'm always driven by the goal of building products that make an impact.

EDUCATION

2022 - 2024
Swaminarayan Vidhyamandir

Higher Secondary Education
75.6%

2024 - Present
Marwadi University

Bachelor of Technology — Computer Science Engineering (Artificial Intelligence)
Sem 1 - 9 GPA
Sem 2 - 8.05 GPA
Sem 3 - 7.8 GPA

CAREER HIGHLIGHTS

Jan 2025-Jul 2025
Shashwat Implants & Surgical Care

WEB DEVELOPER INTERN
Designed and developed responsive web interfaces for healthcare-related digital solutions. Improved user experience through structured layouts and intuitive navigation. Worked on front-end implementation and interface optimization. Collaborated on transforming business requirements into functional web pages

Feb 2026 - June 2026
National Cheng Chung University, Taiwan

SEMESTER EXCHANGE
Completed a semester exchange at National Cheng Chung University, Taiwan, gaining international academic exposure, adapting to a diverse learning environment, and strengthening cross-cultural communication, independence, and problem-solving skills through collaborative academic experiences.

PROJECTS

Calculator Applications | C++, Qt

Built a console calculator and a Qt GUI calculator in C++, supporting arithmetic, power, square root, and percentage operations. Added input validation to handle invalid entries and errors, plus clear (AC) and sign-change functions in the GUI.

To-Do List Desktop App | C++, Qt (Widgets), Qt Creator

Developed a desktop daily planner in C++ and Qt with task add, complete, and delete, plus categories, descriptions, search and filtering, and scheduled reminders. Added a live progress bar, a real-time calendar card, and session persistence using QSettings, so unfinished tasks are restored when the app reopens. Designed a custom pink-themed UI with Qt Style Sheets, including hover effects and a responsive layout.

Plant Disease Detection System | Python, TensorFlow/Keras, Streamlit

Built an AI-powered web application that detects plant diseases from uploaded or camera-captured leaf images, using a CNN trained on the PlantVillage dataset (87K+ images, 38+ disease classes). The app displays symptoms, causes, treatment, and prevention steps for each diagnosis, generates downloadable PDF reports with FPDF, and keeps a searchable prediction history that can be exported to Excel, along with an in-app feedback feature and a custom green-themed UI.

Freelance Collaboration Platform (Mini Upwork) | React, Node.js, Express, Socket.IO, PostgreSQL

Built a full-stack freelance marketplace where clients post projects and freelancers apply with proposals, chat in real time, track milestones, and leave reviews after completion. The platform uses JWT authentication with role-based dashboards for clients and freelancers, and Socket.IO for instant messaging, typing indicators, online status, and notifications. The frontend is built with React, Vite, Tailwind CSS, and Framer Motion, with Prisma ORM on PostgreSQL for data.

Smart Student Productivity Dashboard | React, Redux Toolkit, Tailwind CSS, Node.js, MongoDB

Built an all-in-one academic workspace that lets college students manage assignments, attendance, notes, and focus sessions in one place instead of juggling separate apps. It includes a Kanban-style assignment tracker with deadline warnings, an attendance tracker with percentage calculation and safe-attendance prediction, a Pomodoro focus timer with session history, and markdown notes with search. An analytics dashboard visualizes productivity score, weekly study hours, and completion rate using Chart.js/Recharts. It uses JWT authentication with protected routes, a responsive dark/light UI with Framer Motion animations, and performance techniques such as lazy loading and code splitting.

Frozen Water Run – 2D Endless Runner Game | Python, Pygame, PyInstaller

Developed a 2D endless-runner game featuring an ice princess riding a magical horse across a frozen ocean. Implemented player movement, jumping physics, gravity, collision detection, and randomly generated obstacles with progressive difficulty. Added crystal collectibles with particle effects, score tracking, persistent high scores, and interactive game states including menu, pause, and game over. Integrated background music and sound effects, and packaged the application into a standalone Windows executable using PyInstaller for distribution.

SKILLS

- UI/UX Design
- Web Development
- Figma & Wireframing
- Python
- HTML, CSS, JavaScript
- React.js
- C++ & Qt Framework
- Responsive Design
- Problem Solving
- API Integration
- Team Collaboration
